# Website Health Checklist

Twelve checks every small business website should pass, by RamTech Solutions LLC, Oklahoma City

- [ ] **1. Loads fast on a phone**
  Under 3 seconds. Test free at pagespeed.web.dev. Slow sites lose visitors before they see anything.

- [ ] **2. Looks right on mobile**
  Most of your customers find you on a phone. Text readable, buttons big enough to tap, nothing cut off.

- [ ] **3. Tap-to-call phone number**
  Your number should start a call with one tap, not force visitors to copy it.

- [ ] **4. One-tap contact**
  A WhatsApp button or a short form on every page. If reaching you takes effort, leads go elsewhere.

- [ ] **5. Google Business Profile claimed**
  Claimed, with photos, hours and your correct phone number. This is the listing that shows on Maps.

- [ ] **6. You rank for your own name**
  Search your business name plus your city. If you are not on page one, customers find competitors first.

- [ ] **7. Prices or a clear offer visible**
  Visitors should not have to guess what you charge. A starting price or an offer builds trust fast.

- [ ] **8. HTTPS padlock on**
  No 'Not secure' warning in the browser. That one warning quietly kills enquiries.

- [ ] **9. Contact form actually tested**
  Send yourself a test message this month. Forms break silently more often than owners realise.

- [ ] **10. Five or more Google reviews**
  And the newest one within the last 60 days. Reviews are the first thing a new customer checks.

- [ ] **11. Analytics installed**
  You should know how many people visited this week and where they came from.

- [ ] **12. Backup and an editor exist**
  A backup copy somewhere safe, and at least one person besides you who can update the site.

**Score yourself: 10 to 12 ticked, your site is doing its job. 6 to 9, it is leaking leads. Under 6, most customers never find you at all.**

Scoring under 10? Our launch offer fixes the lot: a complete business website for $99 (standard $400) for the first 3 clients.
